

Downloading and Installation of Software and Programming environments

Please ensure you have the latest version of R and RStudio installed on your machine. This is important, as some packages used in the workshop may not install correctly (or at all) if R is not up to date.

Download and install RStudio - download link

Installing Jupyter using Anaconda

The Jupyter Notebook Developers strongly recommend installing Python and Jupyter using the Anaconda Distribution, which includes Python, the Jupyter Notebook, and other commonly used packages for scientific computing and data science.

For macOS - [here](#) For Windows - [here](#)

Step 3: Launch Anaconda-Navigator

Step 4: From the Anaconda-Navigator UI click on the “Launch” button associated with Jupyter Notebooks

Python

The installation of Jupyter Notebook takes care of the installation of Python and therefore we do not need to install Python separately.
